

## ~~acer palmatum deshojo~~

---

**Acer palmatum**, also known as Japanese maple, is a popular ornamental tree in gardens and parks. It is native to Japan, Korea and China. The tree grows to a height of 15–20 m (49–66 ft) and has a spread of 6–12 m (20–39 ft). The leaves are palm-shaped, with five to seven lobes, and are 2–7 cm (0.79–2.76 in) long and 2–5 cm (0.79–1.97 in) wide. The flowers are small, red or yellow, and borne in clusters of 5-10 blooms. The fruit is a two-seeded samara, which ripens in autumn and disperses by wind.

**Acer palmatum** is widely cultivated as an ornamental tree in Asia and Europe for its attractive foliage. It is also used in bonsai. A number of cultivars have been selected for garden planting, including 'Deshojo' with red leaves, 'Atropurpureum' with purple leaves, and 'Dissectum' with deeply cut leaves.
